teamwork

The first page is the Login In page where you will be asked to enter the User id & password to login into your account. Once you enter all the details, click on the login button. After login, you will be redirected to the dashboard page. If you are a new user then you will have to register yourself first to make your account and log in with the credentials.

Dashboard Page

The screenshot displays the 'getitsms' dashboard. On the left is a sidebar with navigation links: 'Dashboard', 'File Manager', 'Select Device', 'Rest Api', and 'Setting'. The main content area features a top navigation bar with a back arrow and a notification bell icon showing 4 alerts. Below this is a green banner stating 'Devices Deleted!'. A subscription notice indicates 'Your subscription will expire in 6 days' with an 'Upgrade The Plan' button. Two summary cards are shown: 'ALL CONTACTS' with a count of 0, and 'BLAST MESSAGE' showing 0 Success and 0 Failed. At the bottom, a 'Whatsapp Accounts' section includes a '+ Add' button and a table with columns for Number, Webhook URL, Messages Sent, status, and Action. A warning message states '*You have 1 limit whatsapp account'.

Number	Webhook URL	Messages Sent	status	Action
--------	-------------	---------------	--------	--------

On the Dashboard page, you will be able to see the total number of connectivity, and the list of blast messages (i.e how many messages are sent, delivered, and failed during the campaign). You can also add a single numbers or multiple numbers as well.

Dashboard Page

There will be an add option to add the WhatsApp number with the country code, and there is an option for a link webhook in which you have to put a name. Then click on to save button.

Dashboard Page

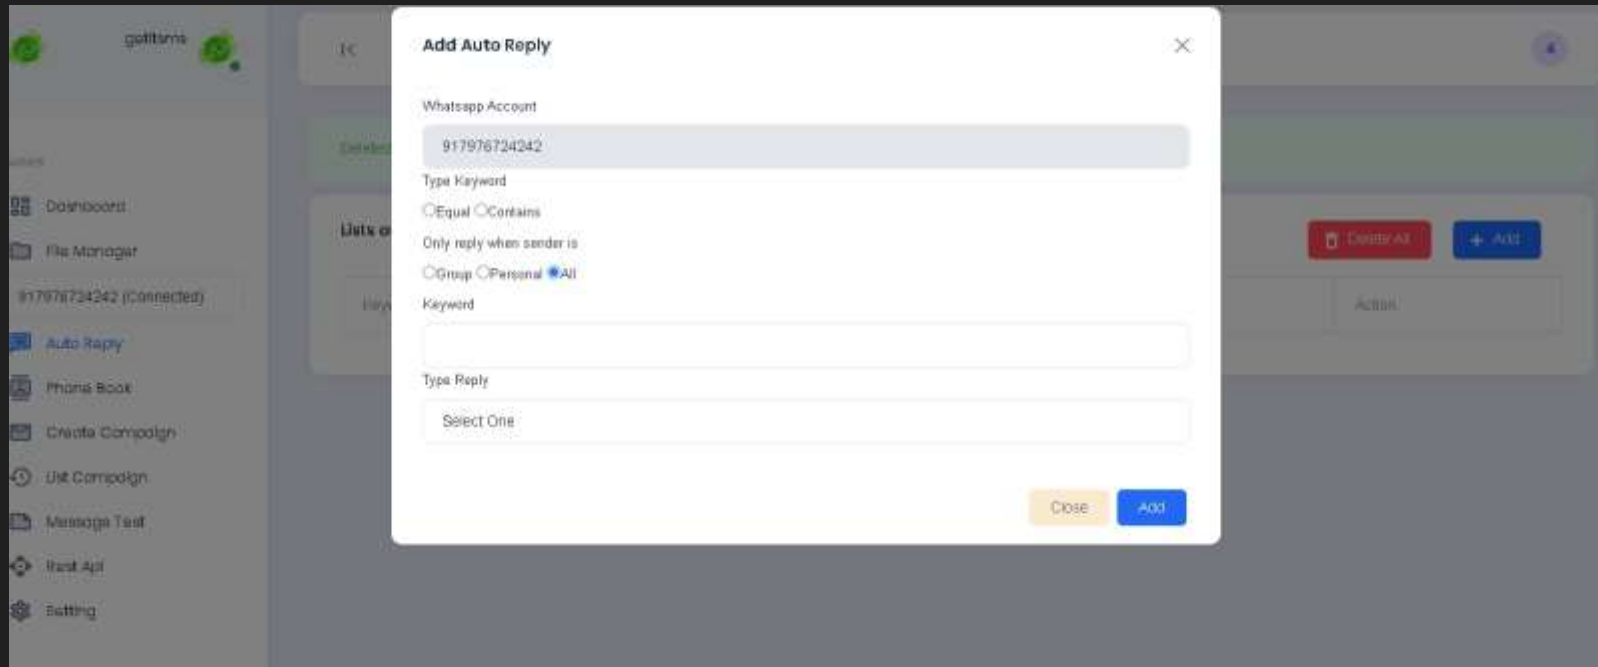

The dashboard page for 'getitems' features a sidebar with navigation options: Dashboard, File Manager, Select Device, Rest Api, and Setting. The main content area includes a subscription notice (6 days left), a 'Upgrade The Plan' button, and two summary cards: 'ALL CONTACTS' (0) and 'BLAST MESSAGE' (0 Success, 0 Failed). Below these is a 'Whatsapp Accounts' section with a note about a 1-account limit and an '+ Add' button. A table lists the added account with details on its number, webhook URL, messages sent, and connection status.

Number	Webhook URL	Messages Sent	status	Action
917876724242	getit	0	Disconnect	 

After adding the number, there is a QR code option in the yellow box, where you have to select the QR code and scan your WhatsApp. Later on, you will be able to see the status of added number is connected or not.

The red option is to delete the added number.

Auto Reply Page

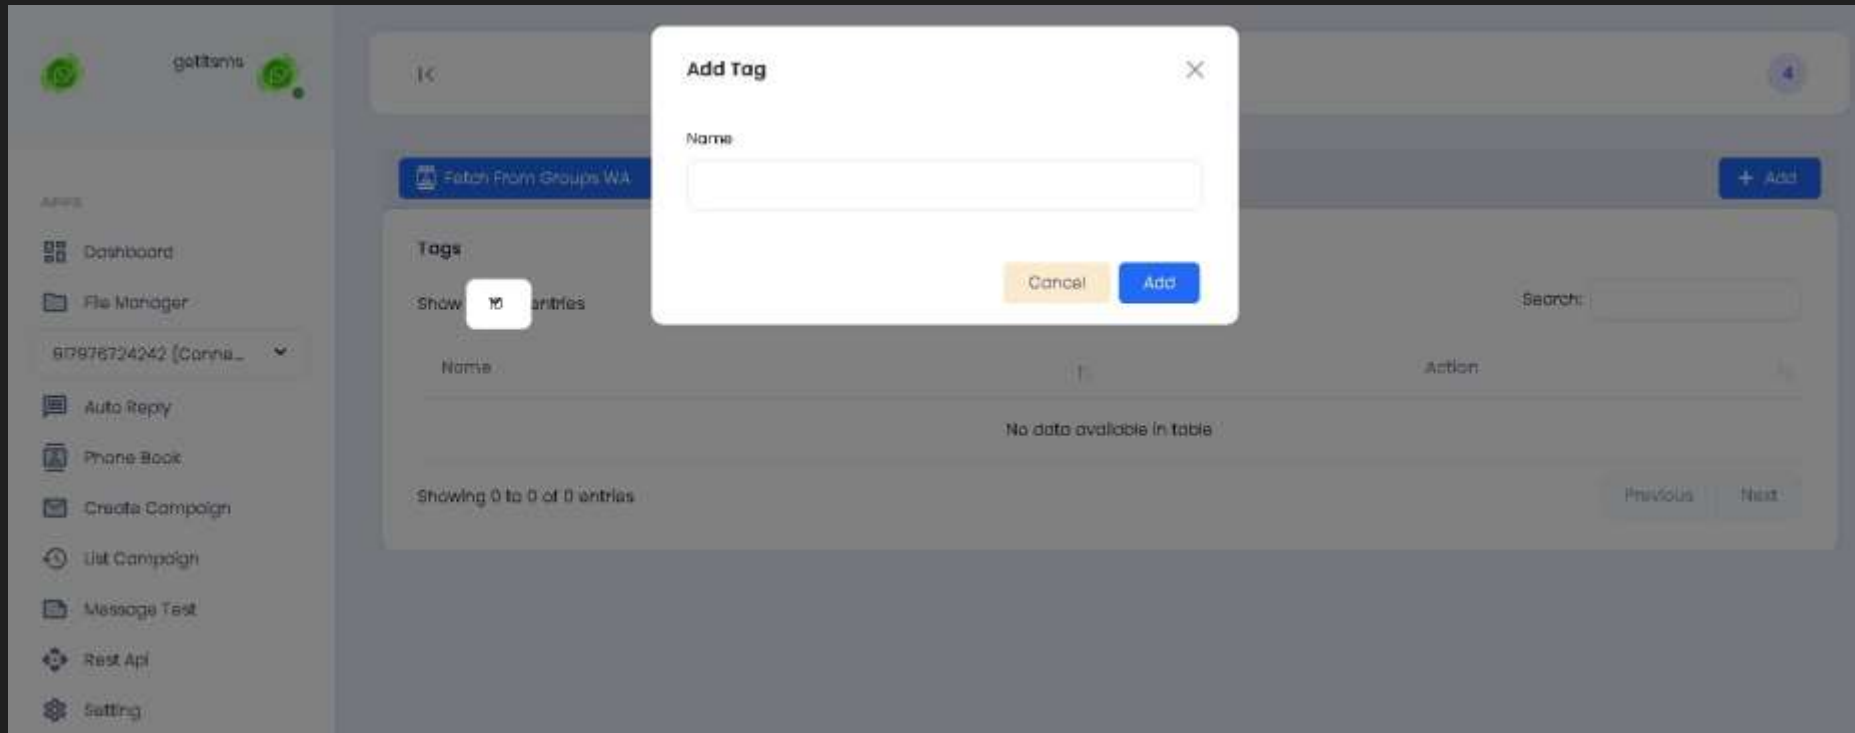

On this page, there is two option add and delete. Where in add option, you can add the keywords. It means you can add automated replies for the customers whenever they try to contact you. You can create a customized message which will send to the customers.

When you click on add auto reply option, you have to choose the option from type keywords (equal) and then you can also choose the type of message (i.e want to send in the group, personal, and all).

Then enter the keyword or message and in type reply choose the option auto-reply.

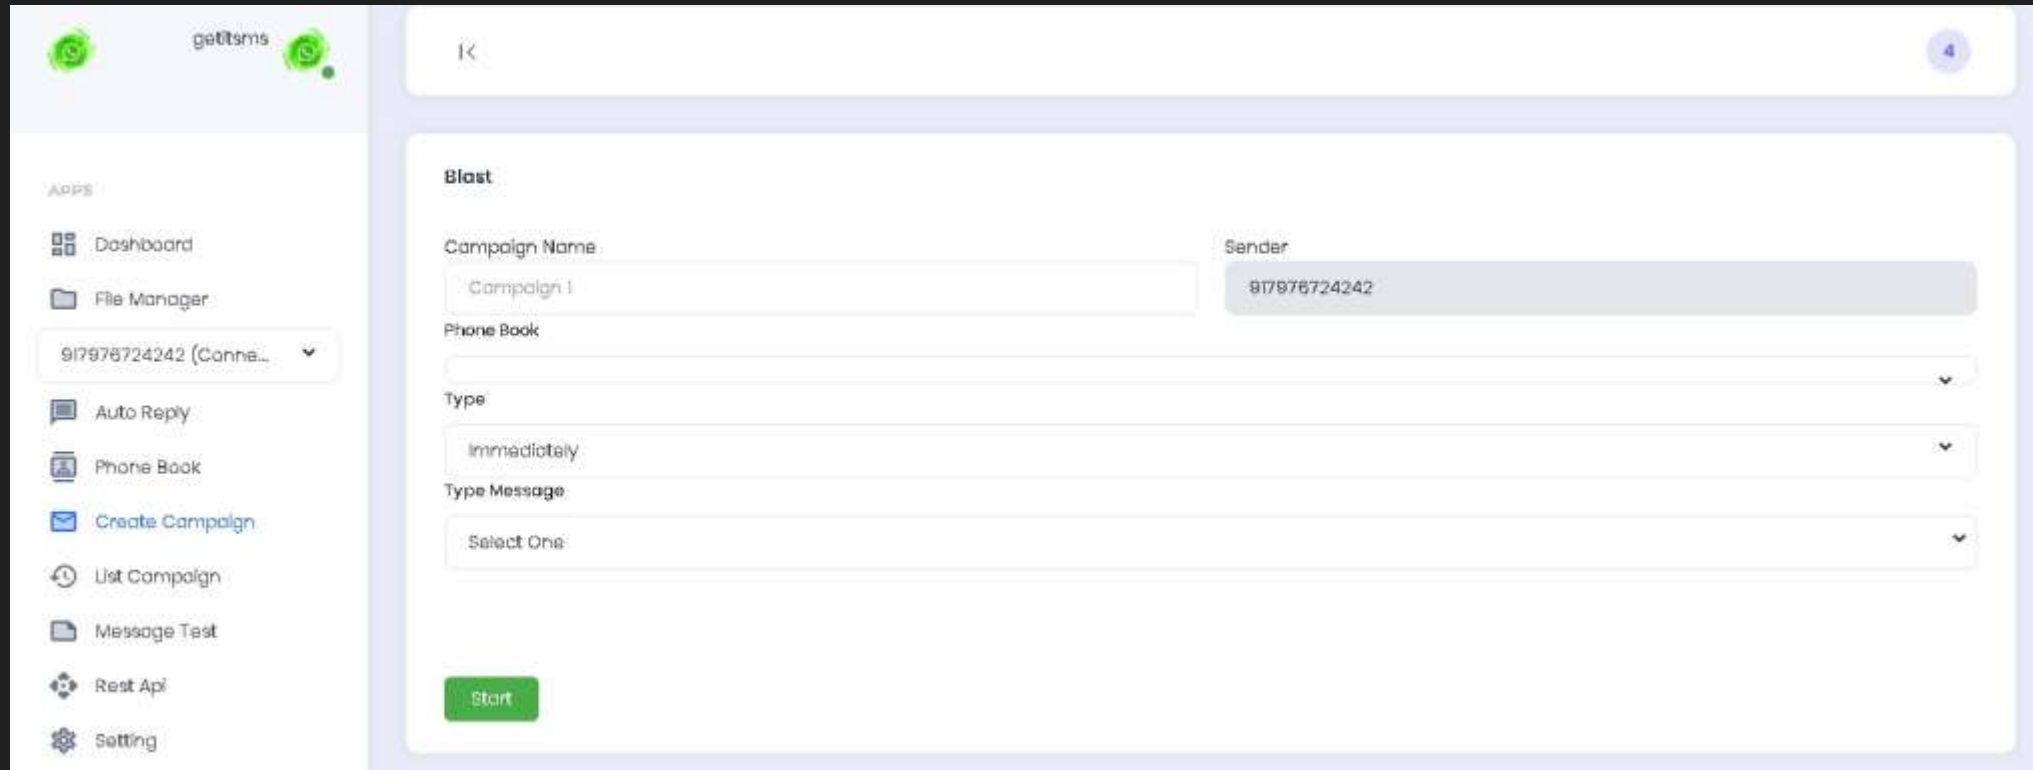

Add Tag

On this page you will have to create a slot to send the messages in bulk, there you will have to add the numbers in bulk. You can do it manually as well as you can also import an excel sheet of numbers.

Before sending the bulk messages, you have to put bulk numbers sheet in a phonebook.

Create Campaign

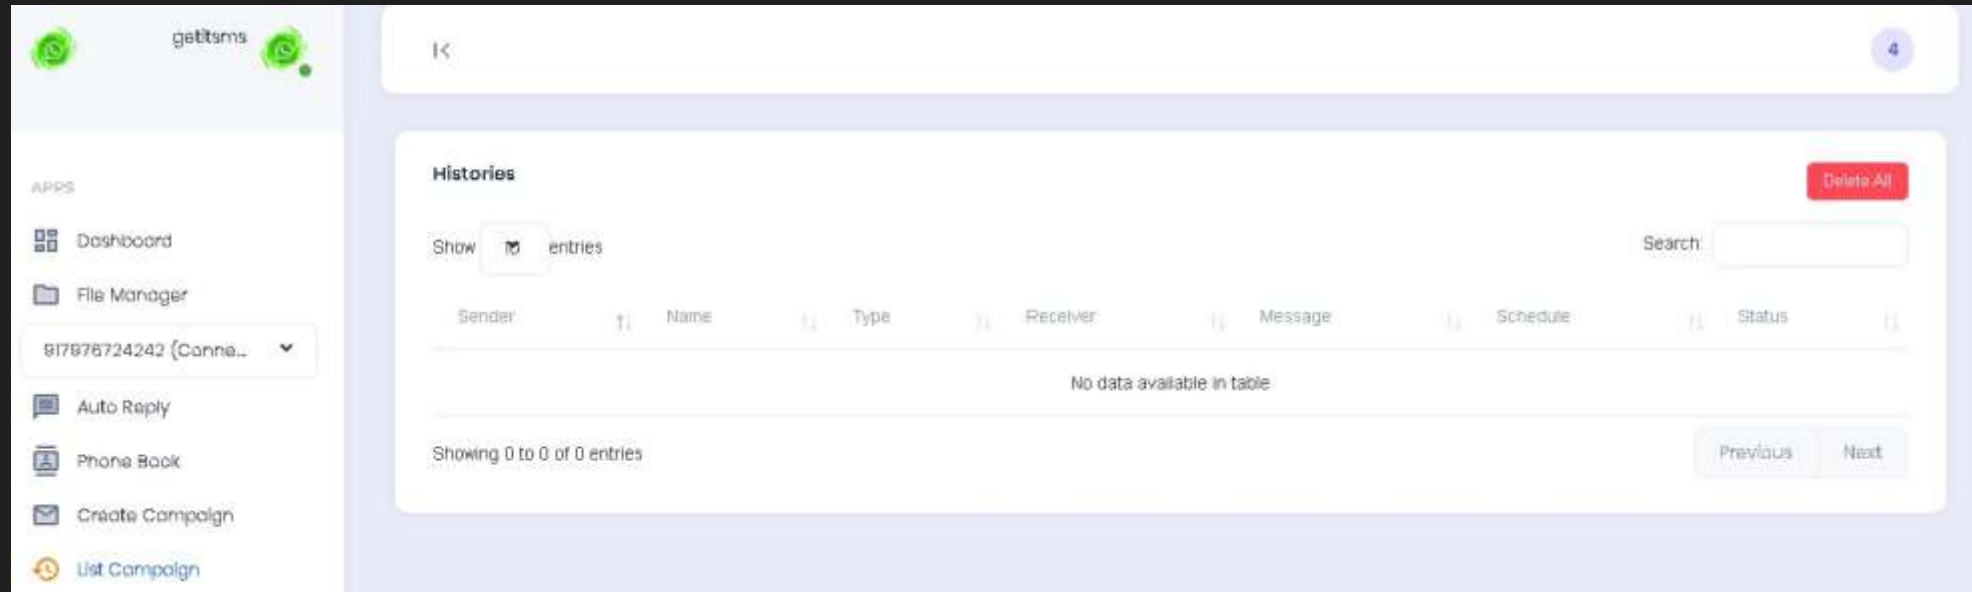

The screenshot displays the 'Create Campaign' interface. On the left is a sidebar with the 'getitsms' logo and a list of applications: Dashboard, File Manager, 917976724242 (Conne... (selected), Auto Reply, Phone Book, Create Campaign (highlighted), List Campaign, Message Test, Rest Api, and Setting. The main area is titled 'Blast' and contains the following fields:

- Campaign Name:** A text input field containing 'Campaign 1'.
- Sender:** A text input field containing '917976724242'.
- Phone Book:** A dropdown menu.
- Type:** A dropdown menu with 'Immediately' selected.
- Type Message:** A dropdown menu with 'Select One' selected.

A green 'Start' button is located at the bottom left of the form area.

On the campaign page, you need to select the slot which you have added on the phone book page then, enter the campaign name, you can schedule the campaign in the type option, then in the type message choose the message type like image, text, button and templates, list.

List Campaign

On this list campaign page, you can see the history of delivered campaigns like total number of messages send, how many campaign success, failed and how many campaigns are pending.

Message Test

The screenshot shows the 'gatitms' application interface. On the left is a sidebar with a menu containing: Dashboard, File Manager, 917976724242 (Connected), Auto Reply, Phone Book, Create Campaign, List Campaign, Message Test (highlighted), Rest Api, and Setting. The main area has a top header with a search bar containing 'K' and a user profile icon. Below the header are tabs for Text, Media, Button, Template, and List. The 'Text' tab is active, showing a 'Text Message' form. The form includes a 'Whatsapp Account' field with the value '917976724242', a 'Number Destination' field, and a 'Message' field. A green 'Send' button is at the bottom of the form.

Here you will be able to send single messages in the formats of text, images, buttons, templates, and lists.

Rest API

The screenshot displays the 'getitems' REST API interface. On the left is a sidebar menu with options: Dashboard, File Manager, 617575724242 (Connected), Auto Reply, Phone Book, Create Campaign, List Campaign, Message Test, Rest Api (highlighted), and Setting. The main area is titled 'Rest API' and shows a configuration table:

Method	POST & GET (All support)
Type	JSON
RESPONSE	{ status : boolean , msg : Text } (JSON)

Below the table, there's a section for 'Rest Api' with tabs for different message types: Text Message, Text Message, Media Message, Button Message, Template Message, List Message, Generate Qr, and Webhook (selected). A code editor shows a PHP script for handling JSON requests:

```
#!/php

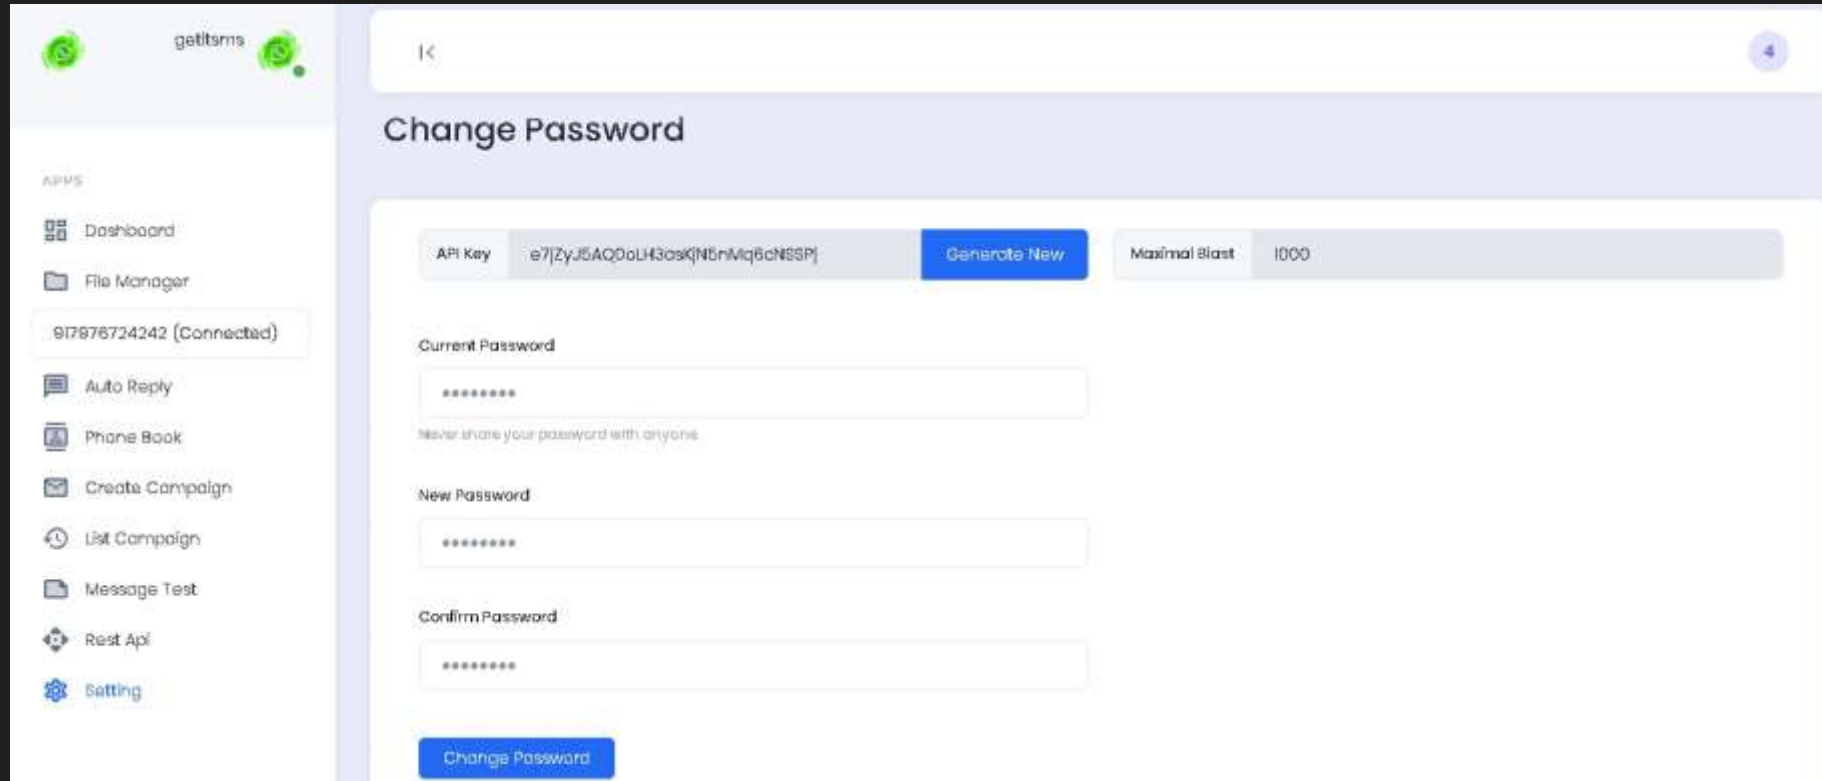

header('content-type: application/json');
$data = json_decode(file_get_contents('php://input'), true);
file_put_contents('whatsapp.txt', date('Y-m-d H:i:s') . "\n" . json_encode($data) . "\n", FILE_APPEND);
$message = strtolower($data['message']);
$from = strtolower($data['from']);
$respon = false;

// auto response text
```

You will get an API to integrate with your website application. There you can also get different kinds of APIs like text API, media API, button API, template API, and list API.

If you send the message through API then you need to select the second text message, where you will see the example url given below API, you may select that API and fulfill the required details. Then you can send specific messages.

Setting

The screenshot shows the 'Change Password' interface of the 'getitsms' application. On the left is a sidebar with a menu of options: Dashboard, File Manager, 917876724242 (Connected), Auto Reply, Phone Book, Create Campaign, List Campaign, Message Test, Rest Api, and Setting (which is highlighted). The main content area is titled 'Change Password' and contains several fields and buttons. At the top, there is an 'API Key' field with a value 'e7[ZyJ5AQ0oLH3osK]N5nMq6cN8SP' and a 'Generate New' button, followed by a 'Maximal Blast' field with a value '1000'. Below these are three password input fields: 'Current Password', 'New Password', and 'Confirm Password', each containing a masked password '*****'. A small warning text 'Never share your password with anyone' is located between the 'Current Password' and 'New Password' fields. At the bottom of the form is a blue 'Change Password' button.

On the settings page, you can change your password and other settings as well related to your account.

Thank You
